

Requirement Document

AMC Schedule Management & AMC Reviewer View Enhancements

Product: E4H Management Hub – AMC Module

1. Objective

This document captures the enhancement requirements for the AMC functionality within the E4H Management Hub (Admin module). The changes are focused on improving:

- AMC schedule visibility and editability for Project Managers
- AMC report review workflow for AMC Reviewers
- Filtering and search capabilities
- AMC report metadata visibility
- AMC PDF completeness and usability

These changes are derived from operational usage and pilot feedback.

2. Existing Workflow

Current AMC Workflow

1. Project Manager creates project and field plans
2. Project Manager sets up AMC:
 - Selects centers
 - Defines AMC frequency
 - Defines AMC duration
 - Assigns vendor and field staff
3. AMC reflects in assigned vendor mobile application
4. Field staff performs AMC and submits report
5. AMC Reviewer reviews the submitted report
6. AMC Reviewer approves or rejects the report

3. Existing Challenges

A. Project Manager Challenges

- Project Manager currently has no visibility into created AMC schedules
- No dedicated view exists to track AMC created under a project
- AMC schedules cannot currently be edited after creation

B. AMC Reviewer Challenges

- Reviewer currently sees AMC reports only in a project-level hierarchy
- Reviewer must:
 - Open project
 - Open center
 - Open report
- This makes report review difficult and time consuming at scale

C. Data Visibility Issues

- State, district, and block fields are currently blank in AMC views and reports
- AMC PDF lacks important metadata

4. Project Manager – AMC Schedule Visibility & Editing

Current State

Project Managers can currently see only:

- Projects
- Field Plans

Within the Field Plan table, an “Activities” column exists.

However:

- AMC schedules are not visible
- AMC schedules cannot be edited

5. Proposed Enhancement – AMC Visibility

Separate AMC Schedule View

Workflow

When user clicks:

Setup AMC

Current workflow remains:

- Select district
- Select block
- Select health facilities
- Select AMC frequency
- Select AMC duration
- Assign vendor
- Assign field staff

Visibility

AMC schedules should appear in another table just below the field plan table, with all the columns available for field plan and with a table label as AMC.

Assessment plans will also be displayed below the AMC table in a separate table similar to field plan, with all the details visible in the field plan columns, with the table label as Assessment Plan

Difference:

- Activities column should display: AMC for AMC activity and Assessment for assessment activity.

Screen for the above functionality - [NewProjectScreen.png](#)

Edit Functionality

AMC should become editable similar to Field Plans:

- Add centers
- Delete centers

- Edit AMC configuration

6. AMC Reviewer Screen Enhancement

Current State

Reviewer currently sees:

Project → Centers → Reports

This makes:

- Searching difficult
- Review slower
- Scaling difficult

7. Proposed Reviewer View Structure

The reviewer module should contain:

1. Existing Project-Level View (retain current view)
2. New Report-Level View

8. Report-Level View

Purpose

Provide direct visibility of all AMC reports without navigating project hierarchy.

Behaviour

Whenever AMC report is submitted by technician:

- It should appear as a row/card in Report-Level View
- Most recently submitted reports should appear at the top

Whenever AMC is newly scheduled:

- It should also appear in this list
- Newly scheduled AMC should appear at the bottom

9. Report-Level View Columns

Each row/card should display:

- Health Facility Name
- State
- District
- Block
- AMC Status
- Submitted on
- Assigned Vendor

Report Opening Behaviour

When reviewer opens a report:

- Existing report detail view should remain same as current implementation

Reviewer should continue to see:

- Parameters
- Photos
- Location captured
- Approve/Reject actions
- Rejection comments

10. Filters – Reviewer Screen

On the left-hand side panel (similar to Saura E-Mitra), the following filters should be added in the report level view:

Status Filters (These are clickable or selectable filters through a check box)

- Scheduled
- Pending Approval
- Approved

- Delayed (AMC, which is delayed according to the actual AMC date, but can be performed as it has not crossed the next AMC activation date)
- Lapsed (AMC, which cannot be performed as the next AMC activation date has already come)
- Rejected

Note:

Current label:

Expired

should be renamed to:

Lapsed

Location & Vendor Filters (searchable filters)

Additional filters:

- State
- District
- Block
- Vendor

11. Searchable Filters Behaviour

Filters should be searchable.

Example:

- User types “Karnataka”
- Karnataka appears in dropdown/filter results
- Clicking it applies filter

Same behaviour should apply for:

- District
- Block
- Vendor

12. Report Visibility Rules

In Report-Level View:

- All reports should be visible

Including:

- Scheduled
- Pending Approval
- Approved
- Delayed
- Lapsed
- Rejected

All should be filterable accordingly.

14. Data Population Corrections

The following fields are currently blank and should be populated correctly: (both in report level and project level view)

- State
- District
- Block

These should reflect:

- In reviewer views
- In report details
- In generated PDF

15. AMC Report PDF Enhancements

Generated AMC report PDF should contain:

Facility Details

- Health Facility Name
- Facility Type

- NIN ID/HFR ID
- State
- District
- Block
- Selfie clicked in front of the name board of the centre
- Health facility location captured

AMC Details

- Vendor Name
- Actual Scheduled AMC Date
- Actual AMC Submission Date

16. Expected Outcome

Implementation of these changes is expected to:

- Improve AMC schedule visibility for Project Managers
- Enable AMC schedule editability
- Improve reviewer efficiency
- Reduce navigation complexity
- Improve filtering and searchability
- Improve operational monitoring
- Improve AMC report traceability
- Improve PDF completeness
