

Issue Creation Platform

Requirements & Workflow Brief

Digit Platform · v1.0

Multi-Channel Issue Raising Platform for Livelihood Program Team

1. Background / Context

To improve issue reporting and resolution for the Livelihood Program Team, we propose extending the existing issue management platform (Saura e Mitra) with workflow changes and new access channels suited to different end-user digital usage levels.

2. Objective

To customise the current incident management platform by making key changes received through team discussion and field visits, using this platform to pilot in a few sites in North Karnataka and test and accumulate more feedback and requirements for improvisation.

To create and test multiple entry points through which end users can raise issues and reach the platform, while ensuring all issues are managed through one centralised platform.

Assumptions

- End users may not be familiar with raising support tickets through a digital platform when they face issues.
- Issue categories and issue types are currently not standardised across different assets or machines.
- Issue resolution is expected to happen between end user and vendor directly; CRM / Program POC will only intervene when escalation, SLA breach or additional support is required.
- Tech POC and State POC roles will not be part of the platform workflow. The Program POC role will function similarly to the existing CRM role.
- End users are primarily focused on reporting the issue and may not have visibility into asset ownership or vendor mapping.

3. Platform Requirements

3.1 Auto Asset Mapping & Auto Ticket Assignment

Current Platform (Existing Workflow)

In the current health platform:

- Health Facility is mapped directly to a vendor (not to individual assets).
- Health Facility raises an issue ticket containing a selected issue type.
- CRM team reviews the ticket and assigns it to the vendor mapped to that Health Facility.

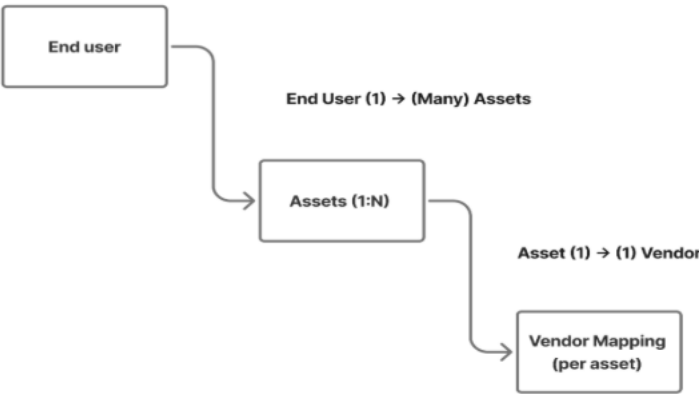

Current Platform Summary	
Mapping	Health Facility → Vendor
Workflow	Health Facility raises ticket → CRM reviews → Assigns mapped Vendor

New Platform Requirement (Livelihood Use Case)

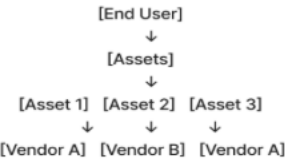

In the new livelihood platform:

- End User replaces Health Facility as the complainant.
- End User can own multiple assets/machines.
- Each asset/machine can be mapped to a specific vendor.
- Different machines under one End User may have different vendors; multiple machines can be associated with the same vendor.
- End User raises tickets against an issue of machines.
- Ticket should be auto-assigned to the vendor mapped with that machine.

Asset mapping

Example

New Platform Summary	
Mapping	End User → Multiple Assets → Each Asset linked to Vendor (defined in backend)
Workflow	End User selects asset + issue type → raises ticket → system auto-assigns mapped Vendor + Program POC notified

Data Ingestion Format for Platform:

[Link for ingestion data](#)

3.2 User Segmentation and User Personas

The three core user groups are:

- End Users who depend on machines for income generation and raise issues when equipment is not working.
- Vendor Partners who install solutions and are responsible for resolving user issues.
- Field POCs who monitor tickets, manage escalations, and coordinate between users and vendors for faster resolution.

User Group	Description	Issue Reporting Channels
Low Digital Access Users	Users who are less comfortable with apps/web platforms and prefer voice support	IVR (Interactive Voice Response), WhatsApp Chatbot
Digital Users	Users comfortable with chat apps, forms, and self-service systems	IVR, WhatsApp Chatbot, DIGIT Cred Login / QR-based Login

User Personas

Meena Patil • End User • Low Digital Access

Roti machine operator, Dharwad

Age: 34	Device: Basic Android	Literacy: Low — calls & WhatsApp only	Language: Kannada
---------	-----------------------	---------------------------------------	-------------------

"When my machine stops I lose that day's income. I just need someone to fix it fast — I don't understand apps or digital platforms."

Goals	Pain Points
• Machine repaired fast — every day down is income lost • Raise issue without navigating an app • Get SMS updates and communicate resolution with vendor as soon as possible	• Issue resolution is very slow • Relies on daughter or family members for any digital transactions • No way to know if complaint was received

On the platform: Calls IVR → selects language → asset → issue via keypad. Or daughter sends WhatsApp message on her behalf. Program POC creates ticket in Digit. Meena receives SMS confirmation and resolution updates only.

Priya Desai · End User · Digitally Proficient

Solar unit & sewing machine operator, Dharwad — raises tickets herself via platform or WhatsApp

Age: 29	Device: Mid-range Android	Literacy: Moderate–high — uses UPI, apps	Language: Kannada, basic English
---------	---------------------------	--	----------------------------------

"My solar panel stopped charging the machine battery. I know how to use the app — I'll just scan the QR on the panel and raise the ticket myself. Takes two minutes."

Goals	Pain Points
• Raise a ticket independently without calling anyone • Track status and know when vendor is assigned • Reopen quickly if issue is not actually fixed	• Wants Kannada interface — English labels are difficult • Frustrated when vendor marks resolved but issue persists • Needs photo upload to clearly show the actual problem

On the platform: Scans QR code → OTP to phone → logs in. Or uses credentials. Or raises via WhatsApp chatbot. Selects asset → issue type → adds comment + photo → submits. Tracks on dashboard. Reopens if needed within 72 hrs.

Ram Kumar · Vendor · Field Service Engineer

Kirloskar Solar Technology, Hubli — manages 15–20 machine repairs across Hubli–Dharwad

Age: 38	Device: Android + laptop	Literacy: Moderate–high — app-comfortable	
---------	--------------------------	---	--

"I need to see which tickets are urgent before I travel, and need a platform which tracks issues and notifies me when there is an issue with any end user."

Goals	Pain Points
• See all assigned tickets with clear SLA countdown and take quick actions • Understand the issue before visiting — avoid wasted trips • Submit quotations and close tickets with minimal steps	• 'Machine not working' tells nothing — needs detail • Travels to a far site only to find issues out of scope or out of warranty • Unable to manage all issues through telephonic calls

On the platform: Credentials login. Gets SMS on assignment → views ticket details + photos → clicks Take Action. Options: Resolve (comment + docs), Out of Scope (reason + comment), Out of Warranty (observation, solution, cost, quotation upload). Must add comment on every closure.

Kavitha Nair · Program POC · State Coordinator

SELCO Foundation, Bengaluru — oversees all Karnataka tickets, handles escalations

Age: 31	Organisation: SELCO Foundation	Literacy: High — dashboards & data	Scope: Karnataka only
---------	--------------------------------	------------------------------------	-----------------------

"I need a single view of everything — which tickets are stuck, which SLAs are breaching, which vendors are underperforming."

Goals	Pain Points
• Full visibility of all Karnataka tickets at any time • Act quickly on SLA breaches and out-of-scope escalations • Raise tickets for users who cannot do it themselves	• No proper tracking of issues or state-wise visibility • No single dashboard showing what needs attention today • Vendor reassignment is manual with no performance comparison

On the platform: Credentials login, scoped to Karnataka only. Creates tickets from IVR/WhatsApp entries on behalf of end users. Gets email escalations for SLA breach and out-of-scope tickets. Take Action: Reassign vendor, assign new vendor, or Decline ticket if non-relevant or resolvable by educating the end user.

4. Platform Overview

The Issue Creation Platform will be built on DIGIT which will allow end users to raise support tickets against their assets. Tickets are auto-assigned to the right vendor, tracked through a defined lifecycle, and overseen by a Program POC who handles escalations.

The platform supports three types of users, two login methods, three issue entry channels, and four vendor action types. All key events trigger SMS or email notifications.

Users

End User

The person who owns or operates the asset and raises issues when something goes wrong.

- Can have one or multiple assets registered to their account.
- Raise issues via IVR, WhatsApp, or directly on the platform.
- Receives SMS notifications when a ticket is raised on their behalf, when it is resolved, or when a quotation is submitted.
- Has 72 hours to reopen a ticket after the vendor marks it resolved.

Vendor

A service provider who is mapped to one or more asset types. Receives and resolves tickets.

- Logs in via credentials only — no QR or OTP login.
- Receives an SMS when a ticket is assigned to them.
- Is the only role that can update or close a ticket from their side.
- Must provide a reason or notes when closing any ticket.

Program POC

An oversight role that monitors all tickets, handles escalations, and acts as the intermediary for IVR and WhatsApp channels. Each POC is mapped to a specific state (e.g. Karnataka).

- Logs in via credentials only.
- Receives an SMS/Email on every ticket creation.
- Manually creates tickets in Digit from IVR entries and WhatsApp submissions (testing phase).
- Tracks tickets and raises tickets on behalf of end users.
- Receives escalation emails when SLA is breached or when a vendor marks a ticket out of scope.
- Can reassign vendors after an escalation.
- When a ticket is marked out of scope, can assign a new vendor, reassign the same vendor after discussion, or decline the ticket.

State-Based User Mapping (Core Requirement)

- Each Program POC login is mapped to exactly one state (e.g. Karnataka, Maharashtra).
- All end users registered under that state are automatically associated with the POC.
- The POC has zero visibility into end users or tickets from other states.

Ticket Tracking

- Dashboard shows only tickets raised within the POC's assigned state.
- All filters, reports, and summaries are automatically scoped to that state.

Raise Tickets on Behalf of End Users

- Can raise a ticket on behalf of end users within their assigned state only.
- The end user dropdown during ticket creation is filtered to show only users mapped to the POC's state.

5. Login & Authentication

There are two ways to log in. End users can use either method. Vendors and the Program POC use credentials only.

Method A — QR Code + OTP (End User Only)

- End user scans the QR code attached to their asset.
- OTP is sent to the phone number registered against that specific asset.
- OTP verified → user is taken directly into the platform and all relevant assets or tickets.

Method B — Credentials (All Users)

- User enters registered username and password.
- Successful login gives access to the platform and all relevant assets or tickets.

6. Issue Raising Channels

There are three ways a ticket can enter the system. The first two go through the Program POC as an intermediary. The third is raised directly on the platform.

Channel 1 — IVR (Phone Call)

- End user calls the IVR number.
- Selects language via keypad.
- Selects asset via keypad.
- Navigates issue categories via number pad.
- Issue entry is logged in the IVR system.
- Program POC views the IVR entry and manually raises the ticket in Digit.

Channel 2 — WhatsApp Chatbot

- End user opens the WhatsApp chatbot.
- Selects option to raise an issue.
- Selects asset and then the relevant issue type.
- Optionally uploads a photo or video.
- Ticket details are visible to Program POC, who creates the ticket in Digit on behalf of the end user.

Note: WhatsApp is for issue raising only. Quotation approvals and rejections are not handled here.

Channel 3 — Direct Platform Raise

This covers two sub-cases: an end user raising their own ticket after logging in, and a Program POC raising a ticket on behalf of an end user.

End User Raises Directly

- End user logs in (QR + OTP or credentials).
- Selects asset → issue types relevant to that asset are shown.
- Selects issue and submits → ticket created and auto-assigned to vendor.

POC Raises on Behalf of End User

- Program POC logs in and selects the relevant end user and asset.
- Selects issue and raises the ticket directly in Digit.
- End user receives an SMS notification that a ticket was raised on their behalf.

7. Ticket Creation & Auto-Assignment

Once a ticket is created in Digit, the platform automatically assigns it to the correct vendor.

- The end user (or POC) selects an asset. Relevant issue types for that asset are shown.
- The applicable issue is selected and the ticket is created.

Auto-assignment: the system maps the end user to asset and then to its vendor and assigns the ticket instantly.

- Ticket status moves to Assigned. SLA timer starts.

Notifications triggered: SMS to Vendor + SMS to Program POC.

8. Vendor Workflow

When a vendor receives an assigned ticket, they log into Digit and take one of three actions. All actions require the vendor to state a reason on closure.

Option 1 — Resolve

The vendor works on the issue and resolves it.

- Vendor marks ticket as Resolved and enters resolution notes.
- SMS sent to end user notifying them that their issue is resolved.
- End user has 72 hours to reopen the ticket if unsatisfied.
- If not reopened within 72 hours → ticket auto-moves to Closed After Resolution.

If reopened, the ticket returns to the vendor.

Option 2 — Out of Scope

The vendor cannot handle the issue — it falls outside their remit.

- Vendor marks ticket as Out of Scope.
- Escalation email sent to Program POC.
- POC reviews and chooses to reassign to the same vendor or a different vendor mapped to that asset.
- New SLA starts from the point of reassignment. Original vendor is not notified.
- Reassigned vendor works on the issue and closes the ticket with a stated reason.

Option 3 — Out of Warranty

The asset is out of warranty. The vendor raises a quotation before any repair work and has 14 days to update the ticket. During this period, both the vendor and the end user receive periodic reminders for any pending actions.

1. Vendor generates and uploads a quotation document (amount + details) in Digit.
2. SMS sent to end user with a link to the quotation document and total amount.
3. Program POC is notified in-platform that a quotation has been submitted.
4. End user reviews the quotation outside the platform and tells the vendor directly.

If accepted: vendor proceeds with repair → marks ticket Resolved → normal 72-hr reopen window applies.

If rejected: vendor marks ticket Declined → ticket closes directly, no POC confirmation needed → SMS to Program POC.

9. SLA & Escalation

-
- When a ticket is raised, the SLA timer is set to 7 days.
 - If the vendor does not take action within the defined window, the ticket auto-escalates to the Program POC via email.
 - After escalation, if the POC reassigns the vendor, a new SLA timer starts from zero.

Ticket Statuses

Status	What It Means	Who Sets It
Pending for Resolution	Vendor auto-assigned by the system	Vendor
Out of Warranty — Pending with Vendor	Vendor uploaded quotation; awaiting end user decision	Vendor
Out of Scope — Pending with POC	Vendor marked out of scope; POC to reassign	Vendor

Out of Scope — Pending with Vendor	POC reassigned; vendor working toward resolution	Program POC
Resolved	Vendor marked resolved; 72-hr reopen window is active	Vendor
Closed After Resolution	Auto-triggered after 72 hrs if end user does not reopen	System
Closed After Decline	Out of warranty: vendor closed after quotation rejection; or out of scope: Program POC / CRM directly resolved issue without vendor	Vendor / Program POC

SLA Timers

Situation	Applies To	Time Limit	Starts From
Any new ticket assigned	Vendor	7 days	Ticket creation
Ticket reopened by end user	Vendor	7 days	End user submits reopen
Ticket reassigned by Program POC	Vendor	7 days	POC reassigns vendor
Out of scope — escalated to POC	Program POC	3 days	Vendor marks out of scope
Out of warranty — quotation uploaded	Vendor	14 days	Vendor uploads quotation

SLA breach on any vendor ticket → escalation email to Program POC. Breach on POC action → reminder email to Program POC.

10. User Workflows

End User Workflow

Raise a Ticket

- Log in via QR code + OTP or credentials.
- Select asset → select issue type → select sub-type → submit.

Issue Types

Issue Type	Sub-Issue Type — Option 1	Sub-Issue Type — Option 2
List of Machines	Machine not working	Don't know how to use
Solar	Solar not working	Don't know how to use

Reopen a Resolved Ticket

- Available within 72 hours of vendor marking ticket as Resolved.
- Click Take Action → select Reopen → modal opens.
- Modal fields: Comment (mandatory) → Submit.
- A fresh 7-day SLA starts for the vendor from reopen.

Vendor Actions

All actions are accessed via the Take Action button on any assigned ticket.

Action	Modal Fields	SLA
Resolve	Comment (mandatory), Supporting documents (optional)	7 days from assignment
Out of Scope	Out of scope reason (mandatory), Comment (mandatory), Supporting documents (optional)	7 days from assignment
Out of Warranty	Observation, Recommended solution, Timeline to resolve, Quotation document (mandatory)	14 days from quotation upload
Declined	Out of warranty – Vendor: Comment (mandatory) Out of scope – Program POC: Comment (mandatory)	14 days / 3 days respectively
Assign a Vendor	Select vendor from the list (mandatory); Comment (optional)	3 days from assignment
Reassign Vendor	Comment (optional)	3 days from assignment

After resolving or closing any ticket, the vendor must always enter a reason or comment before submitting.

Program POC Actions

POC has control over out-of-scope tickets. Actions are accessed via the Take Action button. POC has 3 days to act from the point of escalation.

Action	What It Does	Modal Fields
Reassign	Send the ticket back to the same vendor. Fresh 7-day SLA starts.	No modal
Assign a Vendor	Picks a different vendor from those mapped to the end user's other assets. Fresh 7-day SLA starts.	Vendor list dropdown → Submit
Ticket Declined	Closes the ticket with no fix. Usually issues resolved by another vendor or local technician.	Reason (mandatory) → Submit

11. Notifications

Event	End User	Vendor	Program POC
Ticket created by end user & auto-assigned	—	SMS	Email
Ticket raised on user's behalf by POC	SMS	SMS	—
SLA breached	—	SMS/Email	Email
Ticket marked out of scope	—	—	Email
Ticket reassigned after escalation	SMS	SMS (new vendor)	—
Quotation submitted (out of warranty)	SMS with link	—	Email
Ticket resolved	SMS	—	—
Ticket closed without resolution	SMS	—	Email
Ticket declined by vendor	SMS	—	Email
Ticket declined by Program POC	SMS	—	—

For Program POC, separate credentials will be created for each state and provided accordingly.

12. Translations

In the initial version of the platform, multilingual support will be included, with English and Kannada available as the supported languages.

13. Future Scope

- IVR / WhatsApp integration into Digit platform.
- ERP integration to Digit — connecting the data directly, replacing the ingestion process.
- Installation App development.

14. Workflow & Wireframes

Workflow Diagram

Wireframes : End user

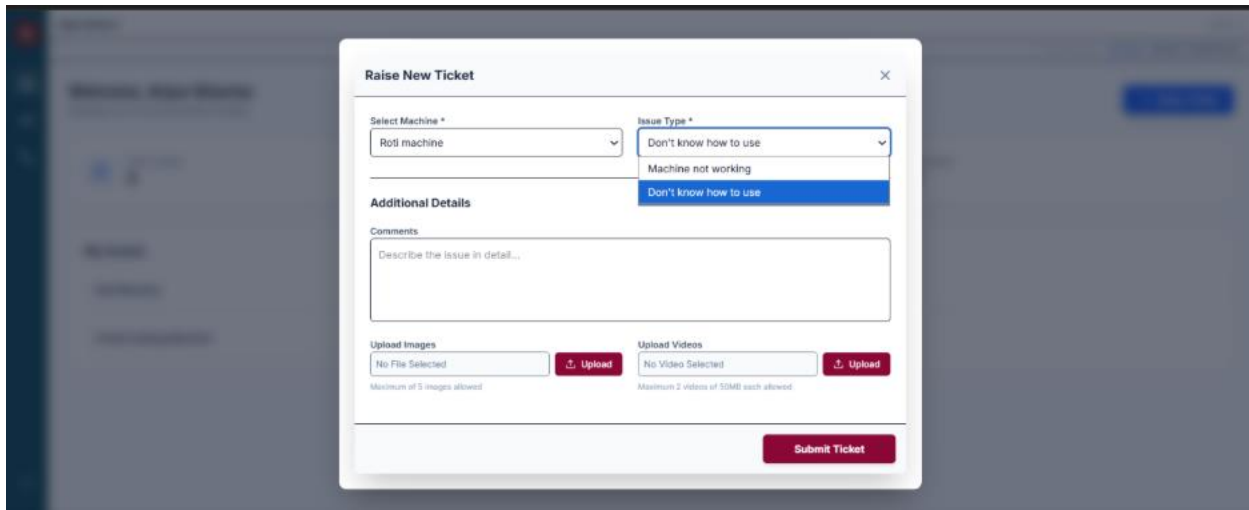

End user home view (Can exclude the dashboard view but we can keep “my assets” sections for better visibility fo assets for end users)

Selecting the asset

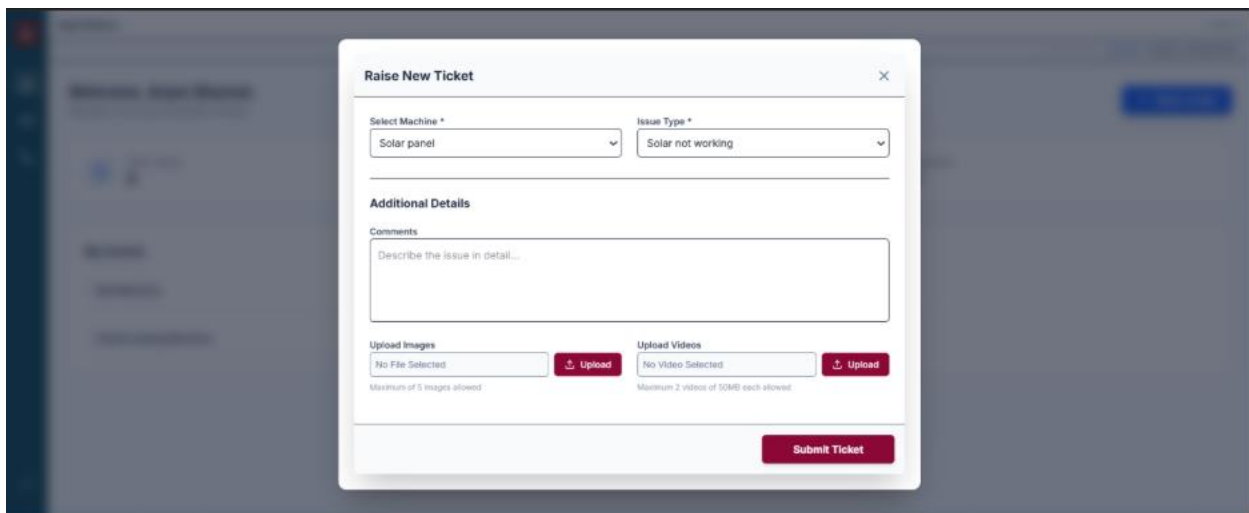

Selecting the issue type

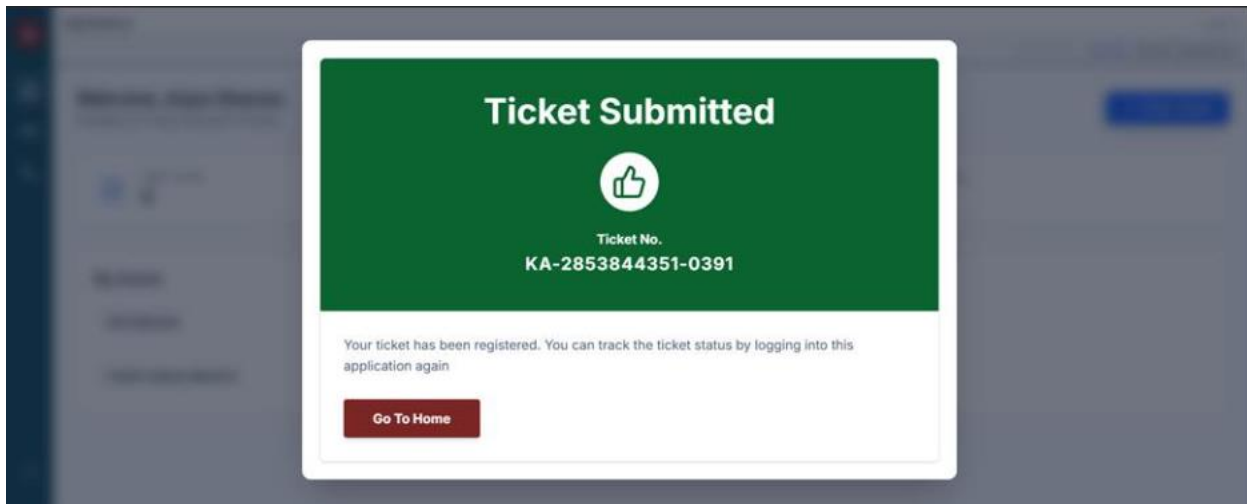

The screenshot shows a 'Raise New Ticket' modal form. At the top, there are two dropdown menus: 'Select Machine *' with 'Rot machine' selected, and 'Issue Type *' with 'Don't know how to use' selected. Below these is a section titled 'Additional Details' containing a 'Comments' text area with the placeholder 'Describe the issue in detail...'. At the bottom, there are two upload sections: 'Upload Images' with a 'No File Selected' button and an 'Upload' button, and 'Upload Videos' with a 'No Video Selected' button and an 'Upload' button. Both upload sections have small text indicating limits: 'Maximum of 5 images allowed' and 'Maximum 2 videos of 50MB each allowed'. A 'Submit Ticket' button is located at the bottom right of the form.

After providing the required details (comments, images & Videos) of the issue ticket can be submitted

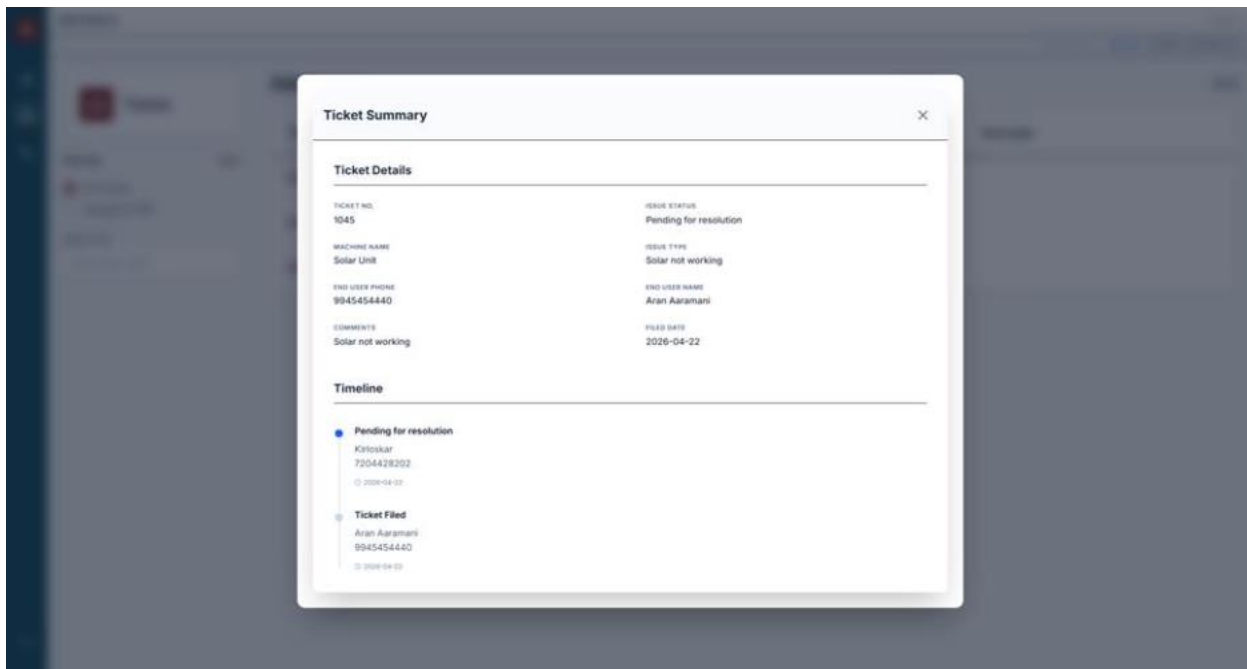

This screenshot shows the same 'Raise New Ticket' modal form, but with different selections. The 'Select Machine *' dropdown now shows 'Solar panel' and the 'Issue Type *' dropdown shows 'Solar not working'. The 'Comments' text area, the upload sections, and the 'Submit Ticket' button remain the same as in the previous image.

Quotation Document*

No File Selected **Upload**

Cancel **Out of Warranty**

Out of warranty : Post marking out of warranty, vendor will update the final resolution after 14 days post discussion with end user and program poc to resolve the issue or decline it by providing reasons

The screenshot shows a 'Ticket Summary' modal window with the following details:

Ticket Details	
TICKET NO. 1006	ISSUE STATUS OUT_OF_WARRANTY
MACHINE NAME Solar powered Oil Processing Machine	ISSUE TYPE Wear Parts Replacement
END USER PHONE 8904878090	END USER NAME Arjun Sharma
COMMENTS Wood hammer is broken.	FILED DATE 2024-03-24
QUOTATION AMOUNT ₹7500	QUOTATION STATUS ACCEPTED

Below the details is a 'Timeline' section with a single entry: 'Quotation Accepted'.

At the bottom right, there are two buttons: 'Resolve' and 'Close', and a red 'Take Action' button.

Closing the ticket mentioning the reason

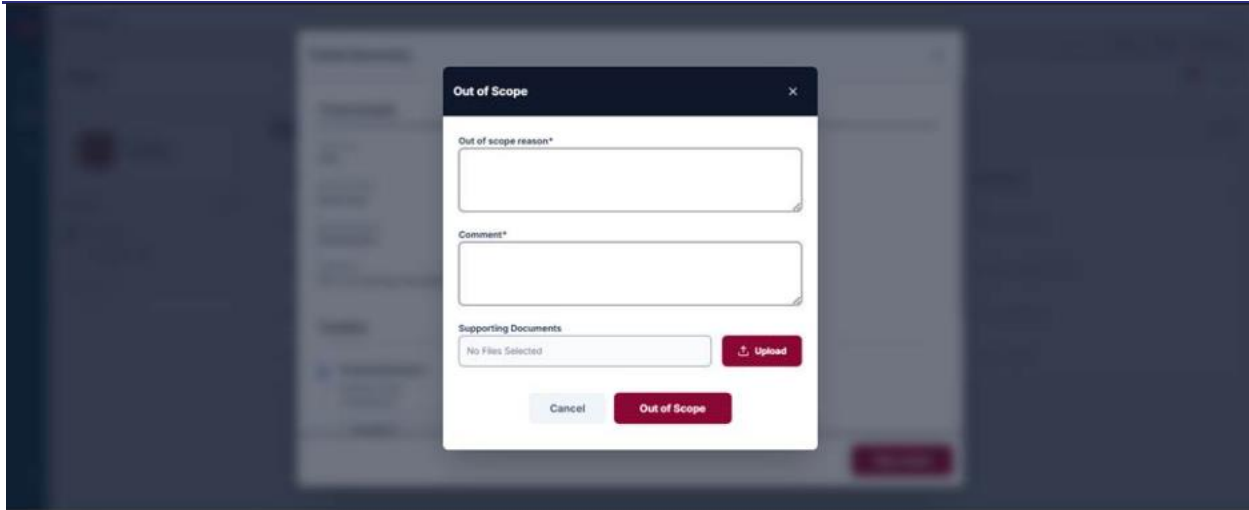

The screenshot shows a 'Close' modal window with the following details:

Closing Reason*

Enter closing reason...

At the bottom, there are two buttons: 'Cancel' and 'Close'.

When the issue is out of scope

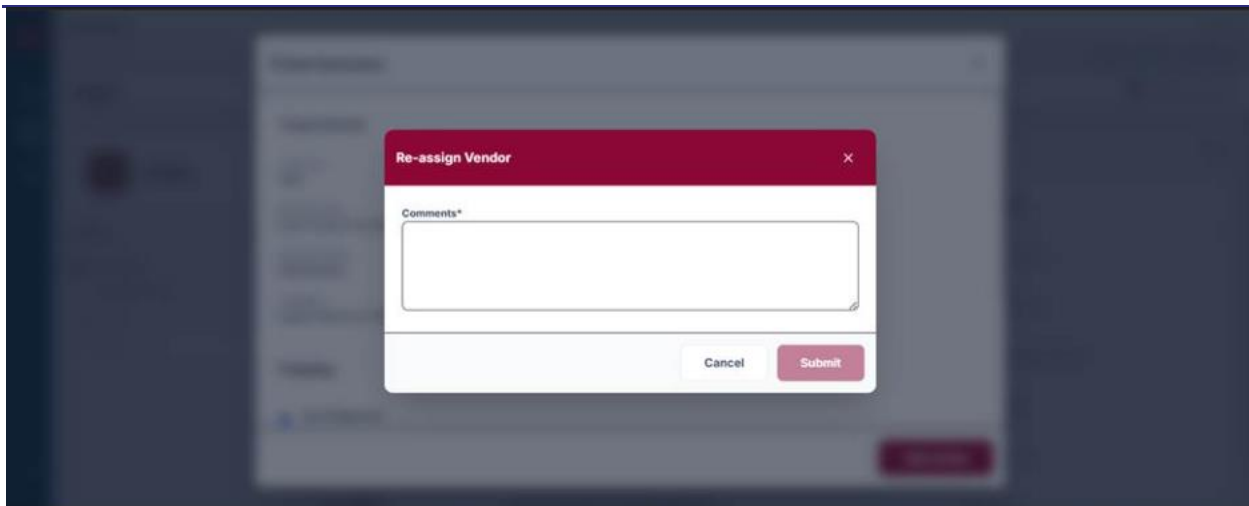

A screenshot of a web application showing a modal window titled "Out of Scope" with a close button (X) in the top right corner. The modal contains three main sections: "Out of scope reason*" with a text input field, "Comment*" with a larger text area, and "Supporting Documents" with a file selection area showing "No Files Selected" and an "Upload" button. At the bottom of the modal are two buttons: "Cancel" and "Out of Scope". The background is a blurred view of the application interface.

Wireframes: Program PoC

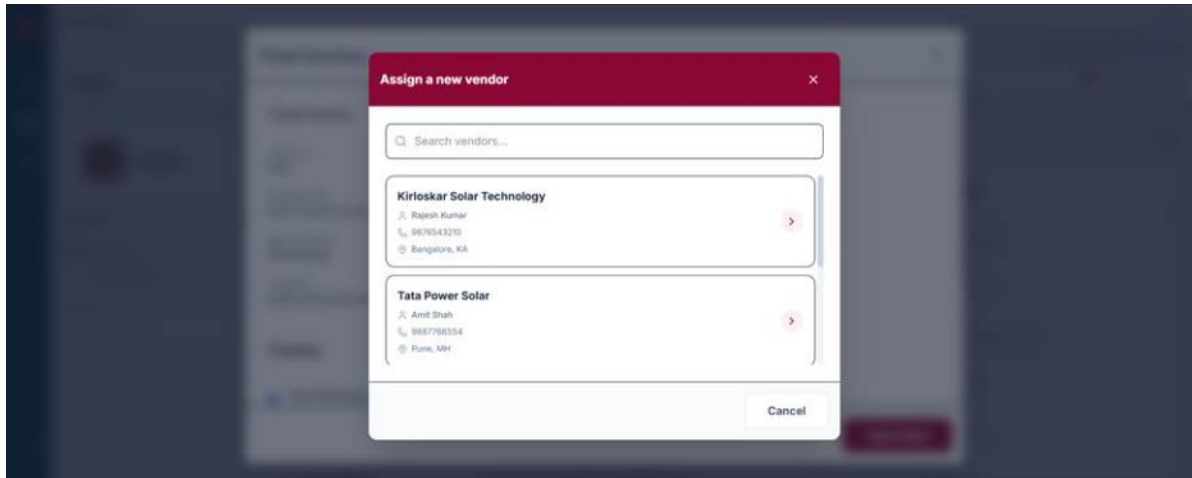

When vendor marks the ticket “out of scope”

Reassigning the same vendor

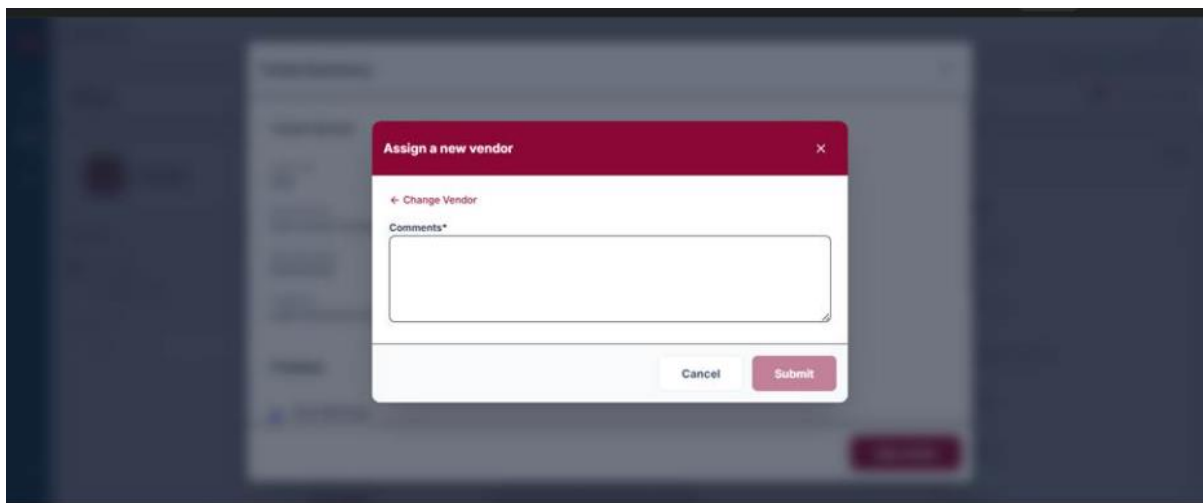

A screenshot of a web application showing a modal window titled "Re-assign Vendor" with a close button (X) in the top right corner. The modal contains a "Comments*" section with a text area. At the bottom of the modal are two buttons: "Cancel" and "Submit". The background is a blurred view of the application interface.

In case of assigning a new vendor from the list of mapped vendors and providing a comment

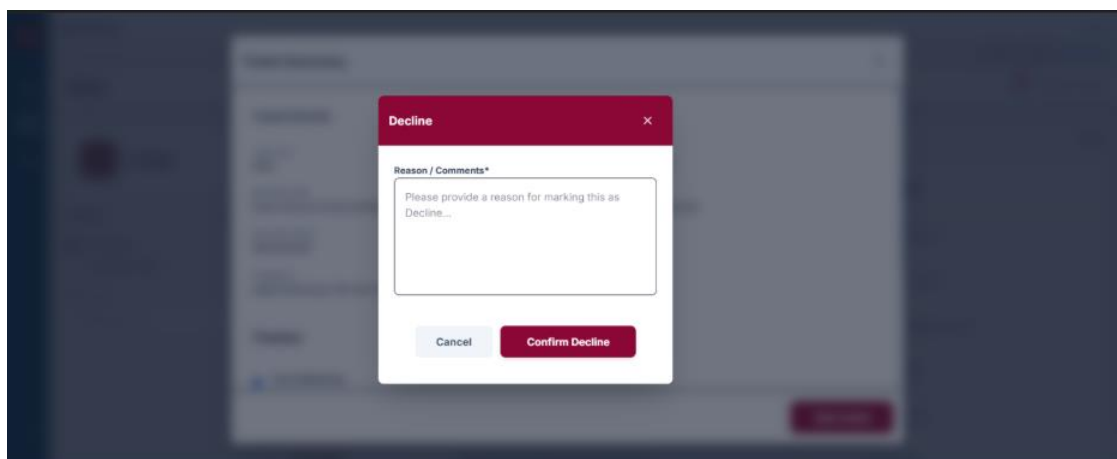

The screenshot shows a modal dialog titled "Assign a new vendor" with a close button (X) in the top right corner. Inside the dialog, there is a search bar labeled "Search vendors...". Below the search bar, there is a list of vendors. The first vendor is "Kirlskar Solar Technology" with contact details: "Rajesh Kumar", "9876543210", and "Bangalore, KA". The second vendor is "Tata Power Solar" with contact details: "Amit Shah", "9887766554", and "Pune, MH". Each vendor entry has a right-pointing arrow icon. At the bottom right of the dialog, there is a "Cancel" button.

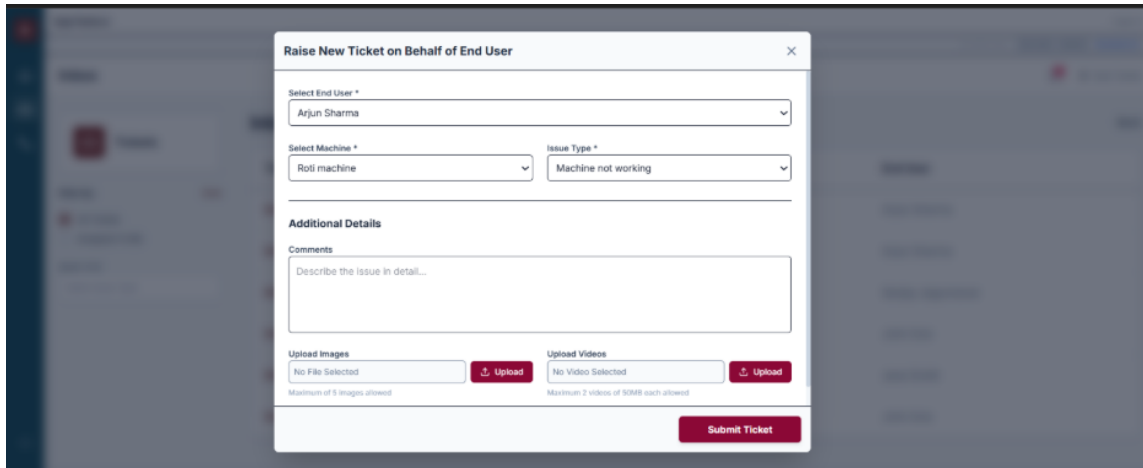

The screenshot shows the same "Assign a new vendor" modal dialog. In this view, the vendor list is hidden, and a "Change Vendor" link with a left-pointing arrow is visible. Below this link is a text area labeled "Comments*". At the bottom of the dialog, there are two buttons: "Cancel" and "Submit".

In case of declining the ticket: Adding a mandatory reason before declining a ticket.

The screenshot shows a modal dialog titled "Decline" with a close button (X) in the top right corner. Inside the dialog, there is a text area labeled "Reason / Comments*" with a placeholder text: "Please provide a reason for marking this as Decline...". At the bottom of the dialog, there are two buttons: "Cancel" and "Confirm Decline".
