

E4H

Assessment Module

Product Requirements Document

1. Document Information

Document Title	Assessment Module — Product Requirements Document
Status	Draft for Review
Audience	Engineering

2. Executive Summary

Today, health facility assessments are run on Kobo forms and Excel sheets — separately from E4H. Decisions get scattered, duplicates show up, and Project Managers can't see live progress.

The Assessment Module brings the whole workflow into E4H. PMs create Projects, run Assessment Plans, decide which facilities need field visits, and hand off verified facilities to installation. One place. Real-time view. Cleaner handoff.

This document covers what we're building, who uses it, how it works, and what 'done' looks like.

3. Background & Context

3.1 Current state

Assessments today run on two tools that don't talk to each other:

- Kobo Toolbox — for phone and field forms.
- Excel sheets — for tracking, eligibility decisions, and installation handoff.

Each state team runs the process slightly differently. Data lives in inboxes, drives, and laptops.

3.3 Why now

Bringing assessments into E4H closes the loop. The whole workflow from government facility list to installation lives in one platform. This is also a prerequisite for scaling the program.

3.4 Key terms

Term	What it means
HF	Health Facility. The unit being assessed (Health Centre, PHC, Sub-Centre, Anganwadi).
Category	HF type — Health or Anganwadi. Set at Facility Ingestion. Drives form routing.
Project	Top-level container for a body of work. Owned by Project Manager.
Assessment Plan	A time-bound assessment cycle inside a Project. Holds HFs and the team running them.
Field Plan	A group of installation-ready HFs with their technical specs. Created from Passed HFs.

Field Assist app	Existing Android app used by field teams. Extended to support assessment forms and a web app to support non android (ios) users.
Plan page	The working surface that opens when a PM enters an Assessment Plan. Live metrics, HF list, Excel actions.

4. Goals & Objectives

4.1 What we want

- Run all assessments inside E4H — drop Kobo and side Excels.
- Give PMs real-time view of every Assessment Plan.
- Cut PM onboarding & final selection of HFs from weeks to days.

5. Scope

5.1 In scope

- Facility Ingestion — bulk upload of government list.
- Project creation and management.
- Assessment Plan creation, role assignment, HF selection.
- Phone and Field assessments on Field Assist (Android) and iOS web app.
- Two Excel round-trips for PM decisions.
- Auto-computed Phone Outcome and Field Outcome.
- Field Plan creation with Solution Design and System Type.
- Handoff to Installation App.

6. User Personas / Target Users

6.1 Project Manager — primary user

- Background: Internal staff. Manages program work across one or more states.
- Lives in: Excel, shared drives, WhatsApp, email.
- Goals: Run assessment plans. Decide which HFs qualify. Hand off cleanly to installation.
- Pain today: Hours per week reconciling phone and physical paper form is filled during field visit. No live view.
- Comfort: High with Excel. Moderate to high with web apps.

6.2 Phone Assessor

- Background: External hires, often part-time, based in-state.
- Tools: Personal mobile phone, Field Assist app.
- Goals: Complete phone assessments accurately and quickly.
- Pain today: Different Kobo links per state. No clear queue. No status visibility.
- Comfort: Low-to-high with mobile apps.

6.3 Field Assessor

- Background: Internal program team. Visits HFs in person.
- Tools: Field Assist app with credentials.
- Goals: Visit the right HFs. Submit accurate field forms on-site.
- Pain today: Google form / kobo submission, and no live tracking or status visibility.
- Comfort: Moderate to high with mobile apps. Comfortable in the field.

6.4 Supporting roles

- Facility Admin — configures the platform: facility ingestion, user accounts.
- System — automated. Routes forms, computes outcomes, updates statuses, refreshes the Plan page in real time.

7. User Stories

7.1 Project Manager

- As a PM, I want to create a Project to group all my work in one container.
- As a PM, I want to create Assessment Plans inside a Project for specific areas and time windows.
- As a PM, I want to bring HFs into a plan by geography or Excel upload — not pick them one by one.
- As a PM, I want to see phone and field submissions live so I always know progress.
- As a PM, I want to set Overall Status via Excel so only verified HFs reach Field Plan.
- As a PM, I want to create Field Plans with Solution Design and System Type per group.
- As a PM, I want to run multiple Field Plans inside one Project to stagger installations.

7.2 Phone Assessor

- As a Phone Assessor, I want to log in to Field Assist with shared state credentials so I can start working quickly.
- As a Phone Assessor, I want the right form to load when I open an HF — no picking.
- As a Phone Assessor, I want to enter my name on every phone form so my submissions are traceable.
- As a Phone Assessor, I want my submission having validations according to the questions so that it will be easier for me to put correct information.

7.3 Field Assessor

- As a Field Assessor, I want to see only HFs marked for field so my queue is focused.
- As a Field Assessor, I want the right form to load on-site automatically.
- As a Field Assessor, I want my submission to be final so I don't have to revisit.

7.4 Admin

- As an Admin, I want to bulk-upload the government facility list with a Category column so form routing works.
- As an Admin, I want to manage Solution Design Type and System Type picklists so PMs always have current options.

- As an Admin, I want to create users and assign roles so the right people see the right plans.

8. Functional Requirements

Architectural changes

- Currently, during facility ingestion, the template includes a mandatory column called “Solution Design Type” where the design type is specified. With the introduction of the assessment module, this column will be removed from the ingestion template, and the system design will instead be assigned during the Field Plan step.

What the system does, grouped by area.

8.1 Facility Ingestion

- Admin uploads the government HF list as an Excel file.
- The template has a Category column — Health or Anganwadi — for every row.
- Facility IDs are unique. Duplicates are rejected.
- The system validates each row on upload. Errors show before saving.

8.2 Project Creation

- PM creates a Project with name, geography (state, districts, blocks), and target dates.
- A Project holds many Assessment Plans and Field Plans over time.
- Creating a Project doesn't need HFs — those come in via Plans.

8.3 Assessment Plan

- PM creates a Plan inside a Project with name, start date, end date.
- HFs come in by geography filter or Excel upload of Facility IDs.
- Plan shows HF count before final creation.
- A Plan can hold both Health and Anganwadi HFs.
- One Phone Assessor and one Field Assessor are assigned at creation.

8.4 Forms

- Four forms: HF Phone, HF Field, Anganwadi Phone, Anganwadi Field.
- When an Assessor opens an HF, the system loads the right form by Category. User doesn't pick.
- Phone forms have a mandatory name field for the Phone Assessor.
- All form submissions are final — no edits.
- During facility ingestion in our template, we have a column called category of facility, we can route the forms from the selection (Health / Anganwadi) we make:

District (Mandatory)	Block (Mandatory)	Health Centre Name (Mandatory)	Category of Facility (Mandatory)	Type of HC (Mandatory)	HFR ID	NIN
			Health			
			Health			
			Anganwadi			
			Select a value from the dropdown			

Fig : This would be the category where the type of assessment form would be decided

Category	Phone	Field
Health	HF Phone Form	HF Field Form
Anganwadi	Anganwadi Phone Form	Anganwadi Field Form

8.5 Status Model

Each HF in an Assessment Plan carries five tracked fields. Here's the full picture:

Field	Values	Who sets it	When	What it means
Phone Status	Pending → Submitted	System (auto)	On phone form submit	Whether phone assessment is done
Phone Outcome	— / Passed / Review	System (auto)	On phone submit, from validations	Flag — is the phone response clean or needs a look
Field Status	— / Pending / Submitted	System (Pending from PM Excel; Submitted from form)	Pending: Excel Round 1. Submitted: on field submit.	Whether field assessment is required and done
Field Outcome	— / Passed / Review	System (auto)	On field submit, from validations	Flag — is the field response clean or needs a look
Overall Status	— / Passed / Review	PM (manual)	Excel Round 2	PM's final call — does this HF move forward to installation

Rules:

- Phone is compulsory. Every HF must complete phone.
- Field is selective. Only HFs the PM marks via Excel Round 1.
- Phone Outcome and Field Outcome are flags. They don't gate the workflow.
- Only HFs with Overall Status = Passed flow to Field Plan.

- HFs marked Review stay in the plan. PM can promote them to Passed later.

8.6 PM Workflow

- Plan page shows real-time metrics — totals, submissions, outcomes, Overall Status counts.
- Plan page has a filterable HF list with all five status fields.
- Download Excel and Upload Excel are always visible.
- Excel Round 1: download lists only HFs with Phone Status = Submitted. PM marks Yes in the Field Assessment Required column. Marked HFs move to Field Status = Pending on upload.
- Excel Round 2: download lists all HFs in the plan with statuses and outcomes. PM sets Overall Status (Passed or Review). Upload commits.
- On Excel upload, the system validates rows. Errors show before saving.
- An HF can be marked Overall Status = Passed only if Phone is Submitted AND (it wasn't marked for field OR Field is Submitted).

8.7 Field Plan

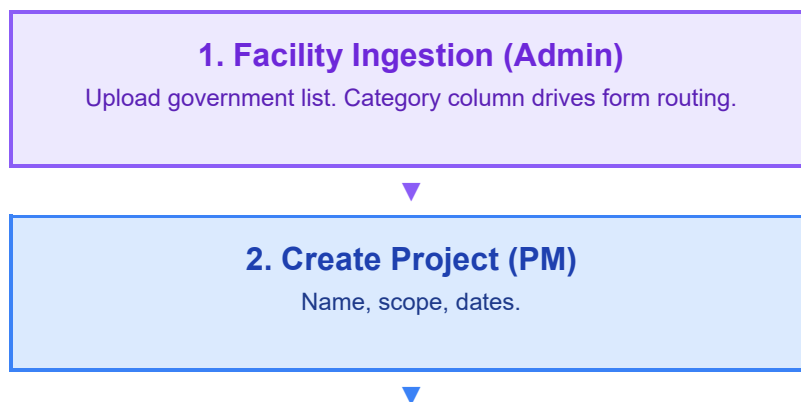

- Only HFs with Overall Status = Passed are available for Field Plan creation.
- PM groups Passed HFs into Field Plans.
- Each group needs Solution Design Type and System Type.
- A Project can hold many Field Plans over time.

8.8 Platform & app

- Field Assist app (Android) — Phone and Field Assessors.
- iOS web app — for iOS users.
- E4H web — PMs and Admins.

9. Workflow / User Journey

Nine steps from facility data to installation handoff. Phone is compulsory for every HF. Field is selective — PM picks who needs an on-site visit. Two Excel round-trips serve as the gates between phases.

3. Create Assessment Plan (PM)

Inside Project. Assign Phone and Field Assessors. Pull HFs.

4. Phone Assessment (Phone Assessor)

Compulsory for every HF. Form auto-routed by Category.

5. Mark HFs for Field (PM)

Excel Round 1. Only marked HFs go to field.

6. Field Assessment (Field Assessor)

Visit and submit. Form auto-routed by Category.

7. Set Overall Status (PM)

Excel Round 2. Passed or Review per HF.

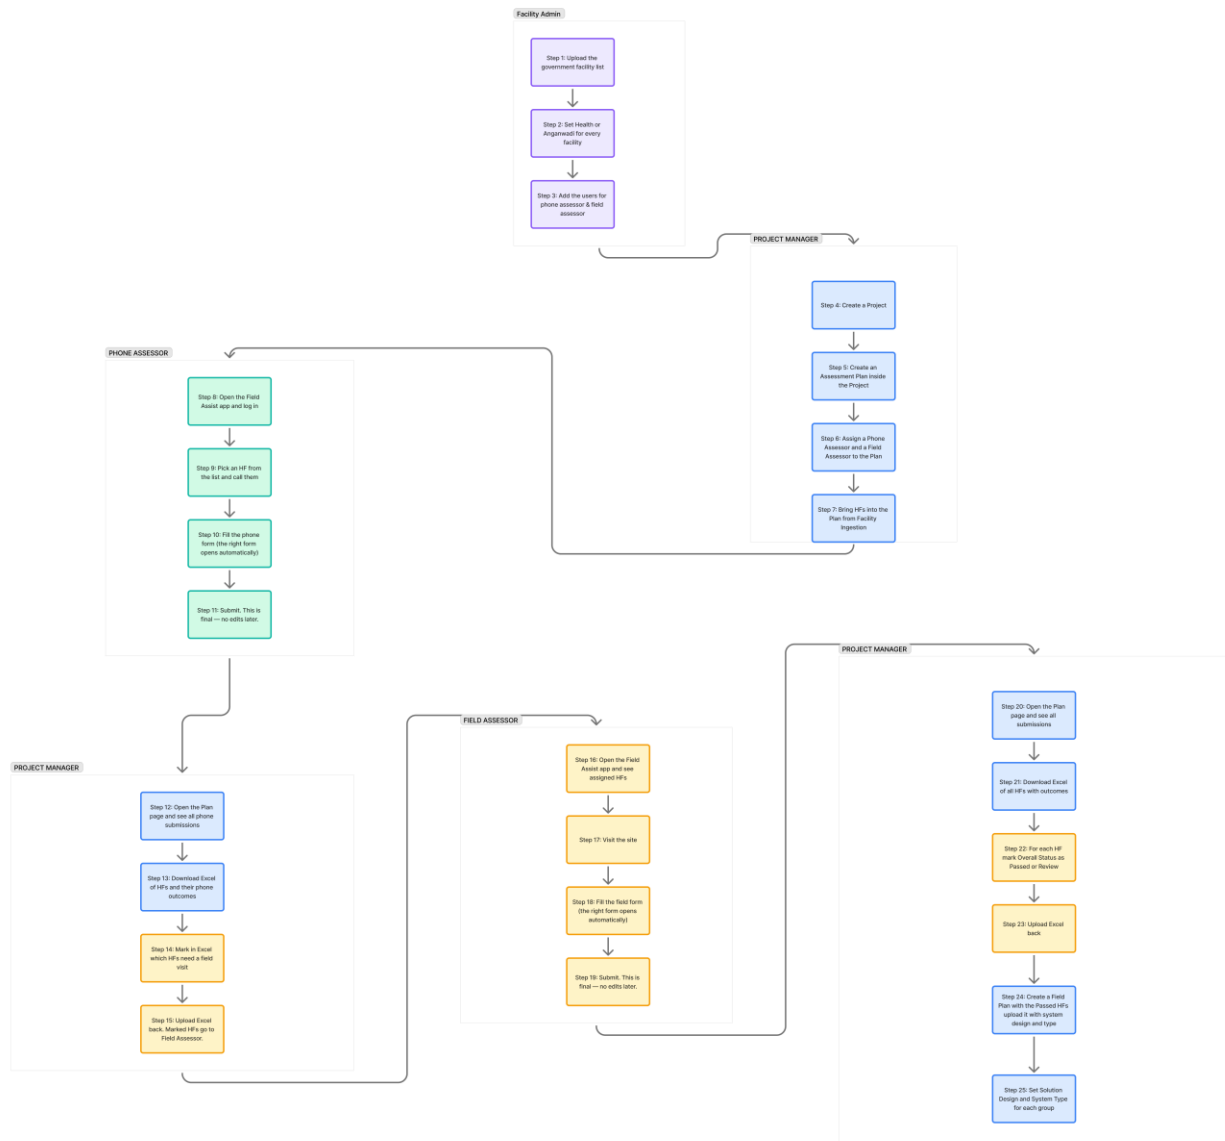

8. Create Field Plan (PM)

Group Passed HFs. Set Solution Design and System Type.

9. Installation

Handoff to Installation App (separate PRD).

[Figma link](#)

10. Workflow Cases

Workflow Cases to be handled:

1. The phone call assessment will always be conducted first for all health facilities.
2. Only health facilities with a completed phone call assessment will appear in the downloadable Excel file for field assessment planning.
3. To initiate a field assessment, the Project Creator must:
 - Download the Excel file
 - Mark the “Field Assessment Required” column as “Yes” for selected health facilities
 - Re-upload the updated Excel file

4. Field assessment will be enabled only after the updated Excel file is successfully uploaded.
5. Selection of health facilities for field assessment is random and entirely dependent on the Project Manager's decision.
6. A health facility can be directly moved to the "Ready for Installation" status after completion of the phone call assessment if:
 - Field assessment is not marked as "Yes", or
 - Field assessment has already been completed and submitted.

Category	District	Block	Phone Status	Field Status	Field assessment required?	Ready for installation?
Health	Ranchi	Bundu	Submitted by Enumerator	-	No	Yes
Health	Ranchi	Tamar	Submitted by Enumerator	Pending with Field Assessor	Yes	Hold
Health	Khunti	Khunti	Submitted by Enumerator	Submitted by Field Assessor	Yes	Ineligible
Anganwadi	Ranchi	Bundu	Submitted by Enumerator	-	No	Yes
Health	Khunti	Murhu	Submitted by Enumerator	Submitted by Field Assessor	Yes	Ineligible

Figure : This would be format that will be used to upload and to change HF to field assessment and final filtering of eligible/ passed HF to field plan.

12. Dependencies

What this module depends on.

12.1 Technical

- E4H web platform — foundation. The Assessment Module is built between project creation and field assessment.
- Field Assist app (Android) — existing app. Extended with an Assessments section.
- iOS web app — new development iOS users.
- Authentication service — shared with E4H web. Supports shared (Phone Assessor) and individual credentials.

12.2 Data

- Government health facility list — provided as Excel by the program team for each state.
- Form validation rules — to be provided by the program team for each of the four forms. Each question tagged Critical, Concern, or Informational. This drives Phone Outcome and Field Outcome.
- Picklist values — Solution Design Type and System Type initial values curated by the technical team.

12.3 Downstream

- Installation App PRD — receives the Field Plan output. Must support import of Passed HFs with Solution Design and System Type.

13. Assumptions

The design rests on these. If any of them change, requirements may need a revision.

- Phone Assessors share state-wise login credentials — one shared login per state.
- Field Assessors use individual internal credentials tied to their identity.

- PMs have access to Excel for the round-trip workflow.
- Phone calls happen outside the platform.
- Phone forms are filled after the call.
- Form validation rules are defined per form before development starts.
- Network connectivity is available for submissions
- English-only UI is fine for v1. Multi-language is a future enhancement.
- Government facility lists are updated manually via Excel.
