

Analytics & User Adoption Tracking Requirements – Requirement Summary

1. Introduction

This document describes the requirements for building a comprehensive analytics and user adoption tracking framework for the E4H ecosystem. The objective is not merely to capture application usage statistics, but to measure adoption, engagement, user behavior, and identify highly engaged users across multiple applications and user roles.

The analytics framework is intended to support:

- Adoption Tracking
- Engagement Monitoring
- Champion User Identification
- Weekly Leadership Reporting

The solution should provide management teams with visibility into how applications are being used and whether intended users are actively engaging with the platform.

2. Applications in Scope

The analytics framework shall cover the following applications:

Saura-eMitra

The primary CRM application used by operational teams.

E4H Field Assist

This application includes:

- Installation module
- AMC module

It is primarily used by field personnel and operational staff.

Kibana Dashboards

Management and analytical dashboards used by leadership and monitoring teams.

E4H Management Hub

Administrative application used for configuration and operational management activities.

The analytics solution should provide a unified reporting mechanism across all these applications.

3. User Roles in Scope

The following user roles are included within the scope of analytics:

- CRM
- State SPOC
- Vendor
- HCR
- Tech PoC
- AMC Field Staff
- AMC Reviewer
- Field Staff
- Field Supervisor
- Installation Reviewer
- Project Manager
- Facility Admin
- SPM
- Central Program Team

Certain roles such as SPM and Central Program Team may not currently exist as formal system roles and may require additional user mapping or grouping mechanisms.

4. Role-Based Analytics and Benchmarking

One of the most important requirements is that analytics must be performed at a role level.

Different user roles have different responsibilities, workflows, and expected usage patterns. Therefore, direct comparisons between users belonging to different roles may produce inaccurate conclusions.

Accordingly:

- Users shall be benchmarked against users within the same role.
- Champion Users shall be identified separately for each role.
- Active User metrics shall be calculated independently for each role.
- Usage patterns shall be analyzed within the context of the user's role.
- Reports shall provide both role-wise analytics and consolidated application views.

Examples:

- Champion CRM User

- Champion Vendor User
- Champion Field Staff User

Cross-role comparisons should not be performed.

5. Internal and External User Classification

Users shall also be categorized as Internal Users and External Users.

Internal Users

- CRM
- State SPOC
- Tech PoC
- AMC Reviewer
- Installation Reviewer
- Project Manager
- Facility Admin
- SPM
- Central Program Team

External Users

- Field Staff
- Field Supervisor
- AMC Field Staff
- Vendor
- HCR

Reports should provide separate analytics and adoption summaries for internal and external users.

6. Business Objectives

The analytics platform should support the following business objectives:

- Measure platform adoption.
- Measure user engagement.
- Track application usage patterns.
- Identify Champion Users.
- Provide weekly user access insights.

- Understand application adoption across states and user roles.

The overall objective is to provide actionable insights to leadership and management teams.

7. Functional Requirements

The system shall support the following capabilities:

Login Tracking

Track every successful login across all applications.

Weekly Active User Tracking

Measure weekly active users for all applications.

State-wise Tracking

Track user activity by state.

Role-wise Tracking

Track user activity by user role.

Page Access Tracking

Capture all pages and modules accessed by users.

Session Tracking

Track session counts for individual users.

User Access Frequency

Measure how often users access applications.

Champion User Rankings

Generate rankings for highly engaged users.

Weekly Reporting

Generate periodic analytics reports for leadership teams.

8. Mandatory Events to Capture

Saura-eMitra

The following events shall be captured:

- Login
- Logout
- Page Viewed
- Ticket Viewed
- Ticket Updated

E4H Field Assist

The following events shall be captured:

- Login
- Logout
- Module Accessed (Installation / AMC)
- Report Submitted
- Page Viewed
- Report Viewed

Kibana Dashboards

The following events shall be captured:

- Login
- Logout
- Dashboard Viewed
- Tables Downloaded

E4H Management Hub

The following events shall be captured:

- Login
- Logout
- Facility Added
- Boundary Added
- Project Created
- Field Plan Created
- AMC Scheduled
- Report Approved

These events represent meaningful user actions and business activities that contribute to engagement analysis.

9. Metric Definitions

Active User

A user who logs in at least once during the reporting period.

Weekly Active User (WAU)

A user who logs in at least once during a week.

Usage Count

Total number of successful logins or accesses during the reporting period.

Page Access Count

Total number of page or module visits during the reporting period.

Champion User

Top users within a role based on overall platform usage.

Champion Users shall be ranked using:

- Login Count
- Session Count
- Page Access Count
- Application Actions Performed

The top five users within each role shall be identified.

Champion User identification shall always be performed within the same user role.

10. Weekly Reporting Requirements

The weekly report shall include the following sections.

Executive Summary

- Total Active Users by Application
- Total Login Count by Application
- Week-on-Week Growth Percentage

Adoption Metrics

- Weekly Active Users by State
- Weekly Active Users by Role
- Weekly Active Users by Internal and External Categories

Usage Analytics

- User-wise access frequency
- Frequently accessed pages
- Top 10 pages accessed
- Top 10 modules accessed
- Average sessions per user

Champion Users

- Top Champion Users by Role
- Top Champion Users by Application

11. Weekly Deliverables

The expected deliverable is a weekly leadership report in Excel format.

The report shall be generated and shared on a weekly basis.

The overall solution should therefore include:

1. Event Capture Mechanism
2. User Activity Logging
3. Analytics Data Storage
4. Aggregation and Reporting Logic
5. Champion User Identification Logic
6. Automated Weekly Report Generation

Conclusion

The proposed analytics framework aims to establish a centralized user adoption and engagement monitoring system across the E4H ecosystem.

The key principles of the solution are:

- Role-based analytics.
- Role-specific benchmarking.
- Champion User identification.

- Internal versus external user analysis.
- Cross-application usage tracking.
- Weekly leadership reporting.

The final system should enable leadership teams to understand platform adoption, identify engagement patterns, recognize highly engaged users, and make informed decisions to improve application usage across the organization.
